

Client Management System — Comprehensive Test Cases Ledger

QA Testing Documentation

May 24, 2026

TC-01-01 | Add Client - Failed Creation (Invalid Fields)

Field	Description
Test Case ID	TC-01-01
Test Case Name	Add Client - Failed Creation (Invalid Fields)
Requirement ID	REQ-01
Related Use Case	UC-01 (Create Client)
Objective	Verify system validation and error messages when providing empty, alphabetic, or ill-formatted values in required client creation fields.
Priority	High
Preconditions	User is logged in and navigated to the 'Add Client' view.
Test Data	Name: [blank]
Phone: HDF5432781	
Email: myemail#company.com	
Steps to Execute	1. Navigate to the Client Management dashboard.
2. Click on the 'Add Client' button.	
3. Leave the 'Name' input completely empty.	
4. Enter 'HDF5432781' into the 'Phone' input field.	
5. Enter 'myemail#company.com' into the 'Email' input field.	
6. Click the 'Submit/Save' button.	
Expected Result	System rejects submission. Red validation messages appear: 'The client's name cannot be blank, it is required' under Name, 'The phone number must not include letters' under Phone, and 'The email must contain the @ character' under Email.
Actual Result	As expected. Red inline error text boxes triggered correctly beneath all three specified input elements without refreshing or losing data.
Status	PASS
Postconditions	Form remains open with the invalid data retained for correction. No record is added to the database.
Created By	Alan Ricardo Jauregui de la Riva
Execution Date	2026-05-24
Comments	Validation mechanics match the requirements listed on the interface design layout flawlessly.

TC-01-02 | Add Client - Successful Creation

Field	Description
Test Case ID	TC-01-02
Test Case Name	Add Client - Successful Creation
Requirement ID	REQ-01
Related Use Case	UC-01 (Create Client)
Objective	Verify that a new client profile is registered correctly when all provided input attributes conform to valid formats.
Priority	High
Preconditions	User is logged in and navigated to the 'Add Client' view.
Test Data	Name: John Doe
Phone: 4491234567	
Email: john@company.com	
Steps to Execute	1. Fill out 'Name' field with 'John Doe'.
2. Fill out 'Phone' field with '4491234567'.	
3. Fill out 'Email' field with 'john@company.com'.	
4. Click the 'Submit/Save' button.	
Expected Result	System saves data. Green pop-up notification displays 'Client created successfully'. Input form clears completely, or user is routed back to main index.
Actual Result	As expected. A green toast banner reading 'Client created successfully' displayed instantly. The entry was verified directly in the client database table.
Status	PASS
Postconditions	A new row for John Doe exists in the customer database. Form fields are fully reset to empty placeholders.
Created By	Alan Ricardo Jauregui de la Riva
Execution Date	2026-05-24
Comments	Database reflection verified with manual SQL lookup; index keys synchronized properly.

TC-02-01 | Edit Client - Successful Modification

Field	Description
Test Case ID	TC-02-01
Test Case Name	Edit Client - Successful Modification
Requirement ID	REQ-02
Related Use Case	UC-02 (Update Client)
Objective	Confirm that updates to a client name are successfully persisted when phone and email parameters are untouched.
Priority	Medium
Preconditions	An existing client profile (e.g., Client ID 1024) is already saved in the database.
Test Data	Target ID: 1024
New Name: Jane Smith	
Phone: (Keep original)	
Email: (Keep original)	
Steps to Execute	1. Navigate to the Client List and search for ID 1024.
2. Click the 'Edit' icon next to the record.	
3. Modify the 'Name' text input field to 'Jane Smith'.	
4. Keep phone and email inputs exactly as they are.	
5. Click 'Save Changes'.	
Expected Result	System displays success toast message 'Changes saved successfully'. User is automatically redirected back to the main client summary grid.
Actual Result	As expected. The toast notification triggered on save and the client view updated immediately to mirror the name modification.
Status	PASS
Postconditions	Client 1024 record reflects name 'Jane Smith' while phone and email records remain identical to original state.
Created By	Alan Ricardo Jauregui de la Riva
Execution Date	2026-05-24
Comments	Audit trail log correctly captures the user entity modifications.

TC-02-02 | Edit Client - Failed Modification (Invalid Phone)

Field	Description
Test Case ID	TC-02-02
Test Case Name	Edit Client - Failed Modification (Invalid Phone)
Requirement ID	REQ-02
Related Use Case	UC-02 (Update Client)
Objective	Ensure system prevents saving an existing client record if an invalid alphanumeric string is provided in the phone text input.
Priority	High
Preconditions	An existing client profile (ID 1024) is active within the database window.
Test Data	Target ID: 1024
Phone: 449abc1234	
Steps to Execute	1. Open the edit modal/view for client ID 1024.
2. Clear the current phone contents and type '449abc1234'.	
3. Click 'Save Changes'.	
Expected Result	System rejects the submission. Inline warning message 'The phone number must not include letters' should display beneath the field, blocking changes.
Actual Result	FAIL: The application displayed an inline error, but did not disable the submission logic. The corrupted string was sent to the server and saved.
Status	FAIL
Postconditions	Client data is corrupted in database with alphanumeric symbols inside the phone attribute field.
Created By	Alan Ricardo Jauregui de la Riva
Execution Date	2026-05-24
Comments	CRITICAL BUG: Form submission logic is lacking complete validation guards on the update endpoint.

TC-03-01 | Delete Client - Successful Deletion

Field	Description
Test Case ID	TC-03-01
Test Case Name	Delete Client - Successful Deletion
Requirement ID	REQ-03
Related Use Case	UC-03 (Remove Client)
Objective	Verify that a client profile without active operations can be permanently scrubbed following proper modal confirmation.
Priority	Medium
Preconditions	Target client profile exists and possesses no ongoing active orders within the system queue.
Test Data	Client ID: 1025
Steps to Execute	1. Navigate to client listing page.
2. Locate client ID 1025 and select the 'Delete' option.	
3. When the confirmation prompt appears, click the '[Confirm]' action button.	
Expected Result	Confirmation modal reads: 'Are you sure you want to delete this client?'. Upon confirmation, modal dismisses and toast banner displays 'Client deleted successfully'.
Actual Result	As expected. Deletion popup prompted confirmation; once clicked, row dropped dynamically from layout with a success message.
Status	PASS
Postconditions	Client ID 1025 is soft-deleted/removed from the client list views and cannot be searched.
Created By	Alan Ricardo Jauregui de la Riva
Execution Date	2026-05-24
Comments	None

TC-03-02 | Delete Client - Failed Deletion (Active Order Block)

Field	Description
Test Case ID	TC-03-02
Test Case Name	Delete Client - Failed Deletion (Active Order Block)
Requirement ID	REQ-03
Related Use Case	UC-03 (Remove Client)
Objective	Confirm data integrity rules prevent purging a client record if they have an ongoing active order processing inside Sprint #2 pipeline.
Priority	High
Preconditions	Target client profile has at least one active order status tracking in progress.
Test Data	Client ID: 1024 (Active Order exists)
Steps to Execute	1. Search for client ID 1024 on the client registry view.
2. Click the 'Delete' button context menu action.	
3. Observe modal restriction behavior.	
Expected Result	System blocks delete action. A warning modal immediately highlights: 'Cannot delete the client because they have an active order in progress'. Deletion is rejected.
Actual Result	As expected. System threw an operational block notification modal detailing the order dependency conflict. Record was preserved safely.
Status	PASS
Postconditions	Client record 1024 remains completely unaltered and active in the system registry.
Created By	Alan Ricardo Jauregui de la Riva
Execution Date	2026-05-24
Comments	Dependency cascade constraint behaves precisely as specified in business logic rule logs.

TC-04-01 | Client Details - Successful View

Field	Description
Test Case ID	TC-04-01
Test Case Name	Client Details - Successful View
Requirement ID	REQ-04
Related Use Case	UC-04 (View Profile Details)
Objective	Verify all basic metadata parameters are properly parsed and structured within the client profile details layout panel.
Priority	Low
Preconditions	Valid target client ID 1024 exists with completed demographic properties.
Test Data	Client ID: 1024
Steps to Execute	1. Open the Client Directory sheet.
2. Select client row 1024 and tap 'View Details'.	
3. Audit the fields rendered on the target visual pane layout.	
Expected Result	Profile card opens up presenting specific metadata labels: Name, Phone, Email, Address, and Registration Date populated with exact values.
Actual Result	As expected. Card loads smoothly and displays all relevant data fields neatly aligned without visual layout breakages.
Status	PASS
Postconditions	Details screen remains display-active until closed or switched by user navigation flow.
Created By	Alan Ricardo Jauregui de la Riva
Execution Date	2026-05-24
Comments	Typography and spacing meet UI guidelines perfectly.

TC-04-02 | Client Details - Failed View (Non-existent ID)

Field	Description
Test Case ID	TC-04-02
Test Case Name	Client Details - Failed View (Non-existent ID)
Requirement ID	REQ-04
Related Use Case	UC-04 (View Profile Details)
Objective	Determine app behavior when an external link or routing path references an illegal or non-existent client lookup key identifier.
Priority	Medium
Preconditions	User tries to explicitly enter an unallocated ID index sequence location via path URL routing.
Test Data	Client ID: 9999
Steps to Execute	1. Force route application view URL endpoint to target client profile metadata page via direct ID injection: '/clients/9999'.
2. Monitor viewport response.	
Expected Result	Application intercepts index error gracefully and displays a clear message card: 'Error: The client does not exist or was deleted'.
Actual Result	FAIL: The application gets stuck in an infinite loop showcasing a standard loading spinner element. No fallback text or error handling catches the exception.
Status	FAIL
Postconditions	Viewport remains blocked by a persistent loading spinner. User must force reload the screen context to resume navigation.
Created By	Alan Ricardo Jauregui de la Riva
Execution Date	2026-05-24
Comments	BUG: Missing catch block or error-boundary component inside the dynamic details panel wrapper.

TC-05-01 | Order History - Successful View

Field	Description
Test Case ID	TC-05-01
Test Case Name	Order History - Successful View
Requirement ID	REQ-05
Related Use Case	UC-05 (View Order History)
Objective	Verify that all archived or completed transaction entries belonging to an old client are queried and listed cleanly.
Priority	Medium
Preconditions	Target customer profile possesses multiple archived transactions in past operational sprints.
Test Data	Client ID: 1024
Steps to Execute	1. Navigate into client profile details card for ID 1024.
2. Select the tab labeled 'Order History'.	
3. Check historic list parameters.	
Expected Result	History component populates showing past historical orders containing ID, Date, Total amount metric, and final Status flags ('Completed/Canceled').
Actual Result	As expected. Historic ledger sub-table loads a matrix mapping exactly 5 archived historical logs corresponding accurately to database rows.
Status	PASS
Postconditions	Order log summary list matrix is displayed inside the viewport window container.
Created By	Alan Ricardo Jauregui de la Riva
Execution Date	2026-05-24
Comments	Paging component is functional and sorts records in reverse chronological order as standard.
