

Functional and Non-Functional Requirements:

"Client" Section

1. Functional Requirements (FR)

➤ FR - Customer Data Management

The system must allow the registration and storage of the following mandatory fields for the customer profile:

- Customer / Company Name
- Contact Name (Designated liaison person)
- Email Address
- Delivery Address
- Telephone Number

➤ FR - Input Validations (Integrity Rules)

To mitigate billing and data-entry errors, the system must automatically validate the following constraints in real time before allowing data to be saved:

- Customer Name (Company) Validation:
 - Must have a maximum length of 15 characters.
 - Must have a minimum length of 5 characters.
 - It is a mandatory field (Must not be left blank).
 - Must not consist exclusively of numeric values.
- Contact Name Validation:
 - Must have a maximum length of 50 characters.
 - Must have a minimum length of 3 characters.
- Email Address Validation:
 - Must obligatorily contain the @ character (Valid email structure).
 - Must have a maximum length of 50 characters.
- Address Validation:
 - Must have a maximum length of 50 characters.
- Telephone Number Validation:
 - Must accept numeric characters only (Restrict letters and special symbols).

- FR - Module Functionalities

Order History: The system must link each customer to their respective historical log of quotations and purchases to facilitate tracking and recurring sales.

2. Non-Functional Requirements (NFR)

- **NFR01 - Corporate Identity (Usability):** The interface dedicated to the customer module must visually incorporate the company logo and the established institutional color palette.
- **NFR02 - Intuitive Interface Design (UX):** To achieve a more familiar and agile workflow for employees, the system must employ recognizable, standardized icons on navigation links and buttons instead of extensive text labels.
