## Introduction

The following content presents the results and advances of Sprint #3. In this sprint, we continued the development and refinement of the Client Management module. We detailed functional requirements (FR01-FR37), updated use case diagrams and scenario cards, refined the database model, improved interface mockups, executed comprehensive test cases, and managed all tasks using Jira. This document consolidates all deliverables for the sprint.

# Functional and Non-Functional Requirements

## Functional Requirements (FR)

### Customer / Company Name

- FR01 - The system must record the name of the Customer / Company.
- FR02 - The customer's name must be unique.
- FR03 - The customer's name must have a maximum length of 20 characters.
- FR04 - The customer's name must have a minimum length of 3 characters.
- FR05 - The customer's name is a mandatory field (Must not be left blank).
- FR06 - The customer's name must not consist exclusively of numeric values.

### Company Logo

- FR07 - The system must allow storing the company logo as an image URL.
- FR08 - The company logo field is optional.

### Contact Name

- FR09 - The system must record the contact name (designated liaison person).
- FR10 - The contact name must have a maximum length of 50 characters.
- FR11 - The contact name must have a minimum length of 3 characters.
- FR12 - The contact name must not have numeric values.

### Company Email Address

- FR13 - The system must record the company email address.
- FR14 - The company email must contain the @ character.
- FR15 - Maximum length of 50 characters.
- FR16 - Minimum length of 10 characters.
- FR17 - Must not consist exclusively of numeric values.
- FR18 - Mandatory field.

### Contact Email Address

- FR19 - The system may record the contact person's email.
- FR20 - If provided, must contain @.

- FR21 - Maximum 50 characters.
- FR22 - Minimum 10 characters.
- FR23 - Optional field.

### **Company Telephone Number**

- FR24 - The system must record the company telephone number.
- FR25 - Numeric characters only (no letters or symbols).
- FR26 - Length of exactly 11 characters.
- FR27 - Mandatory field.

### **Contact Telephone Number**

- FR28 - The system may record the contact's telephone.
- FR29 - If provided, numeric only.
- FR30 - Length of 11 characters.
- FR31 - Optional.

### **Delivery Address**

- FR32 - Record delivery address.
- FR33 - Maximum 50 characters.
- FR34 - Minimum 10 characters.
- FR35 - Must not be exclusively numeric.

### **History & Search**

- FR36 - The system must link each customer to their respective historical log of quotations and purchases.
- FR37 - The system must include a filter to search customers.

### **Non-Functional Requirements (NFR)**

- **NFR01** - The interface dedicated to the customer module must visually incorporate the company logo and the established institutional color palette.
- **NFR02** - To achieve a more familiar and agile workflow, the system must employ recognizable, standardized icons on navigation links and buttons instead of extensive text labels.

- **NFR03** - The colors used must match the logo. Selected colors: #E49C54, #E6BE8C, #F2B06E, #F5ECE3.

### Color Palette

Figure 1: KAVEM Color Palette: #E49C54, #E6BE8C, #F2B06E, #F5ECE3

## Use Case Diagram

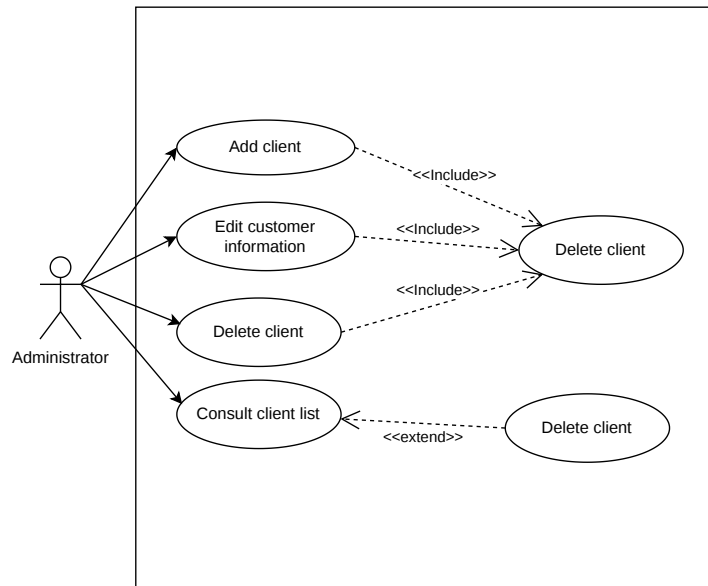

Figure 2: Use Case Diagram for Client Management Module

**Main Actors:**

- Administrator

**Main Use Cases:**

- Add Customer
- Edit Customer Information
- Delete Customer
- Consult Customer List / Search Customer by Name/ID
- Authenticate User (extends Add, Edit, Delete, Consult)

## Use Case Scenario Cards

### UC-01: Add Customer

| Element               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Scenario</b>       | The administrator registers a new distributor or recurring customer.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Main Actor</b>     | Administrator                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Precondition</b>   | The Administrator must have valid access credentials and the customer's commercial data (name/company, contact, shipping address).                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Main Flow</b>      | <ol style="list-style-type: none"><li>1. The Administrator selects the "Add customer" option.</li><li>2. The system requests identity authentication (Authenticate user).</li><li>3. After successful validation, the system displays the registration form.</li><li>4. The Administrator enters the data (Name, RFC/Tax ID, Email, Telephone, Shipping Address).</li><li>5. The Administrator confirms by clicking "Save".</li><li>6. The system validates the data, stores the record, and displays a success message.</li></ol> |
| <b>Alternate Flow</b> | Authentication error: system denies access.<br>Duplicate customer: if ID or email already exists, system alerts and does not save.                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Postcondition</b>  | The new customer is active and available for assigning orders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

### UC-02: Edit Customer Information

| Element               | Description                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Scenario</b>       | The Administrator modifies a customer's contact or delivery information.                                                                                                                                                                                                                                                                                                                  |
| <b>Main Actor</b>     | Administrator                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Precondition</b>   | The selected customer must exist in the database.                                                                                                                                                                                                                                                                                                                                         |
| <b>Main Flow</b>      | <ol style="list-style-type: none"><li>1. Administrator selects a customer and clicks "Edit Information".</li><li>2. System invokes Authenticate User.</li><li>3. System enables editable fields with current data.</li><li>4. Administrator makes modifications.</li><li>5. Administrator presses "Update".</li><li>6. System saves changes and refreshes the customer profile.</li></ol> |
| <b>Alternate Flow</b> | Empty required fields: system highlights error in red and blocks saving.                                                                                                                                                                                                                                                                                                                  |
| <b>Postcondition</b>  | Customer data is updated immediately.                                                                                                                                                                                                                                                                                                                                                     |

### UC-03: Delete Customer

| Element               | Description                                                                                                                                                                                                                                                                                                                           |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Scenario</b>       | The Administrator deregisters a customer from the catalog.                                                                                                                                                                                                                                                                            |
| <b>Main Actor</b>     | Administrator                                                                                                                                                                                                                                                                                                                         |
| <b>Precondition</b>   | The selected customer must exist.                                                                                                                                                                                                                                                                                                     |
| <b>Main Flow</b>      | <ol style="list-style-type: none"><li>1. Administrator selects customer and presses "Delete".</li><li>2. System requests security validation (Authenticate User).</li><li>3. System displays confirmation pop-up.</li><li>4. Administrator confirms deletion.</li><li>5. System performs logical erase and confirms action.</li></ol> |
| <b>Alternate Flow</b> | Customer with active orders: system prevents deletion and issues notice.                                                                                                                                                                                                                                                              |
| <b>Postcondition</b>  | Customer no longer appears in active sales lists.                                                                                                                                                                                                                                                                                     |

### UC-04: Consult Customer List / Search Customer by Name/ID

| Element               | Description                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Scenario</b>       | Administrator views the complete customer catalog or uses filters to locate a customer.                                                                                                                                                                                                                                                                                                                     |
| <b>Main Actor</b>     | Administrator                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Main Flow</b>      | <ol style="list-style-type: none"><li>1. Administrator clicks "Check Client List".</li><li>2. System requires Authenticate User validation.</li><li>3. System renders a table with all registered customers.</li><li>4. (Optional) Administrator types Name or ID in search bar.</li><li>5. System dynamically filters the table in real time.</li><li>6. Administrator locates desired customer.</li></ol> |
| <b>Alternate Flow</b> | No matches: system displays "No customers were found matching the search".                                                                                                                                                                                                                                                                                                                                  |
| <b>Postcondition</b>  | Information is displayed on screen, ready for reading or further actions.                                                                                                                                                                                                                                                                                                                                   |

## Database Entity-Relationship Diagram

Figure 3: Entity-Relationship Diagram for Client Management Module

### Main Entities

- **Clients:** id\_client (PK), name\_client, contact\_name, company\_email, contact\_email, company\_phone, contact\_phone, address, logo\_url, registration\_date.
- **History:** id\_history (PK), id\_client (FK), order\_date, total, status, etc.

## Interface Design (Mockups)

### Main Client Menu Mockup

### Client Details Mockup

Figure 5: Client Details Screen showing Name, Contact, Emails, Telephones, and Order Statistics

## Navigation Design

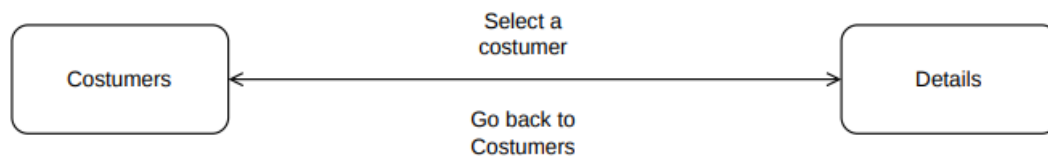

Figure 6: Navigation Flow: Select a customer, then option to go back to customers list

## Navigation Structure

- **Main Menu**
  - Go to Clients tab
    - \* View Client List
      - Apply Filters
      - Search by Name/ID
      - Select Client
      - View Client Details
      - Edit Client Information
      - Delete Client (with confirmation)
      - View Order History
    - \* Add New Client
      - Fill Registration Form
      - Save Client

## Test Cases

**Sprint #3 Focus:** Client Management operations (Add, Edit, Delete, Search, Details, Order History)

### Test Cases for Client Management

#### TC-01: Add Customer

|                         |                                                                                                                                                                |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
