

Card 1: Add customer

Element	Description
Scenario	The administrator registers a new distributor or recurring.
Main Actor	Administrator
Precondition	The Administrator must have valid access credentials and the customer's commercial data (name/company, contact, shipping address for the vests/tables).
Description of the Scenario	The administrator registers a new distributor or recurring customer on the platform to be able to associate future orders for life jackets or boards.
Main Flow	1. The Administrator selects the "Add customer" option. 2. The system requests identity authentication (Authenticate customer). 3. After being successfully validated, the system displays the registration form. 4. The Administrator enters the data (Name, RFC/Tax ID, Mail, Telephone, Shipping Address). 5. The Administrator confirms the action by clicking "Save". 6. The system validates the data, stores the record in the database, and displays a success message.
Alternate Flow/Exceptions	Authentication Error: If credentials fail, the system denies access to the form. Duplicate customer: If the ID or email already exists, the system alerts the Administrator and does not save the record until it is corrected.
Postcondition	The new customer is active in the system and available for assigning orders for finished products.

Card 2: Edit customer information

Element	Description
Scenario	The Administrator modifies a customer's.
Main Actor	Administrator
Description of the Scenario	The Administrator modifies a customer's contact or delivery information due to a change of tax address or purchasing personnel.
Main Flow	1. The Administrator selects a specific customer and clicks "Edit Information". 2. The system invokes the Authenticate User use case to verify editing permissions. 3. The system enables editable fields with current customer information. 4. The Administrator makes the pertinent modifications (e.g. updating the merchandise delivery address). 5. The Administrator presses "Update". 6. The system saves changes and refreshes the view of the customer's profile.
Alternate Flow/Exceptions	Empty Required Fields: If the Administrator deletes a required field (such as name or email), the system highlights the error in red and blocks saving
Postcondition	Customer data is updated in the database immediately for future shipments.

Card 3: Delete Customer

Element	Description
Scenario	The Administrator Delete a customer's.
Main Actor	Administrator
Description of the Scenario	The Administrator deregisters a customer from the catalog (due to prolonged inactivity or explicit request), ensuring that the sales history is not compromised.
Precondition	The selected customer must exist in the database.
Main Flow	1. The Administrator selects the customer and presses the "Delete" button. 2. The system requests security validation through Authenticate User. 3. The system displays a confirmation pop-up: "Are you sure you want to delete this customer ?". 4. The Administrator confirms the deletion. 5. The system performs a logical erase (disables it for new orders) and confirms the action on the screen.
Alternate Flow/Exceptions	Customer with Active Orders: If the customer has an order for vests or boards in the shipping or manufacturing process, the system prevents deletion and issues a notice indicating that pending flows must first be closed.
Postcondition	The customer no longer appears on active sales and administration lists.

Card 4 : Consult customer list

Element	Description
Scenario	Consult Customer List,Authenticate User Search Customer by Name/ID
Main Actor	Administrator
Description of the Scenario	The Administrator views the complete customer catalog for account auditing or uses specific filters to quickly locate a buyer's file for boards or vests.
Main Flow	1. The Administrator clicks "Check Client List". 2. The system requires and includes Authenticate User validation. 3. The system renders a table with the general list of all registered customer . 4. Extension (Optional): The Administrator needs the data of a specific customer , so they type their Name or ID in the search bar (Search customer by Name/ID). 5. The system dynamically filters the table in real time showing only matches. 6. The Administrator locates the desired customer .
Alternate Flow/Exceptions	No Matches: If searching by Name/ID returns no results, the system displays the message: "No customers were found matching the search".
Postcondition	The information is presented on the screen ready for reading, with the option to refer to edit or delete flows.
